My name is Erik Sandqvist, and I have a strong passion for development, with a particular focus on web development. I have studied development with a specialization in web both in high school and at university. What I am most passionate about is creating functional and visually appealing websites that serve a clear purpose and provide value to others. I always strive for excellence.

Experience

Internship at Keylinx (2025)

During my studies at Jönköping University, I completed an internship at Keylinx, an IT consulting company. There, I worked as a developer building a web-based application to manage internal processes such as employee management, developed from scratch. The work covered the entire development lifecycle, including database design, data modeling, API development, testing, design, and frontend development. I worked with technologies such as C#, .NET Core, and MudBlazor, among others.

Ikea Wearhouse 2023 - Now

During my studies, starting from my final year of high school, I have been employed at IKEA Torsvik as a warehouse associate. Over time, I also took on additional responsibilities, including a coach/buddy role, where I trained new employees and acted as a point of support for colleagues. I have balanced this role alongside my studies, and I work full-time during the summers. Key experiences I take with me from IKEA is the importance of delivering quality for the customer, strong teamwork, and maintaining a high and consistent work pace.

McDonalds 2022-2023

Selected Project

Station Automation for IKEA (2025-2026)

I identified an opportunity to solve a recurring problem at the warehouse where I work part-time. Team leaders were manually assigning employees to different stations each day using Excel, which was time-consuming and often resulted in the same individuals being assigned to the same stations too frequently. To address this, I developed a web application using JavaScript logic and a database to automate and optimize the assignment process. The solution reduced manual effort and improved fairness in task distribution. I later presented the application to managers and team leaders, where it was very well received and appreciated by those who tested it.

Education

Web development & Graphic design at Jönköpin school of engineering 2023-2026 180hp

I am currently in my final year of a three-year degree, where I focus on web development. The program also includes elements of graphic design as well as courses such as DevOps.

Summer Course in User-Centered Cybersecurity (2025, 10 hp)

Technology Program, Erik Dahlbergsgymnasiet (2020-2023)

I completed the Technology Program at Erik Dahlbergsgymnasiet in Jönköping, with a focus on web development. I also took advanced courses such as Mathematics 4 and German.

Throughout my studies, I maintained strong discipline and consistently achieved good grades
